Website & Browser Extension Dev for Content Rating Platform

PROJECT DETAILS

🏷 **Mobile App Development, Web Development**

📅 **Sep 2022 - Ongoing**

💲 **$50,000 to $199,999**

❝ *"Their services were great, and the product they've developed is amazing."*

PROJECT SUMMARY

deltAlyz Corp. has built the website and browser extension of an online content credibility rating company. The key technologies they use include React, Cosmos NoSQL database, Docker, and Azure microservices.

PROJECT FEEDBACK

The company is happy with the website's quality; they're confident about the progress of the product's development. deltAlyz Corp. has delivered quality work. They've applied for and got accepted to Microsoft for Startups Founders Hub program, which significantly helps the project move forward.

The Client

Introduce your business and what you do there.

I'm the founder and president of Kredibull. We're creating a website that rates the credibility of all internet news, information, and content. We use a Wikipedia-style approach, and the ratings are based on votes from the members around the credibility of content, posts, and reviews. They can downvote posts, too. Similar to how Google indexes every page of the internet, we're looking to index and rate all information and news content online.

The Challenge

What challenge were you trying to address with deltAlyz Corp.?

We had to develop our website and its accompanying browser extension. I had some designs and wireframes, but I lacked technical knowledge. As a result, we hired deltAlyz to develop and put the website together.

Our goal was to develop a simple yet elegant website with an ambitious scope. It should be fast and responsive, emphasizing content rather than visuals and graphics. Moreover, we wanted the site to be highly scalable since we wanted millions of users and ratings for hundreds of millions of web pages.

The Approach

What was the scope of their involvement?

deltAlyz had built our website from scratch. The key technologies they use include React for the frontend web application and Cosmos NoSQL for the database. They've built the microservices architecture using Docker and Azure functions. In addition, the team has implemented my designs using a zero-trust model.

At present, we're in the final stages of developing the app's full functionality. The deltAlyz team is tweaking and testing everything for that.

What is the team composition?

I mainly work with Rabi (BI & Automation Expert) and two of their developers.

How did you come to work with deltAlyz Corp.?

I found deltAlyz on Clutch. Three vendors met my criteria, and I spoke with all of them. We were in discussion for around a month. In the end, I decided to go with deltAlyz.

How much have you invested with them?

The price of the project is around $140,000 CAD (approximately $104,000 USD)

What is the status of this engagement?

We started working together in September 2022, and the engagement is ongoing.

The Outcome

What evidence can you share that demonstrates the impact of the engagement?

We've received a great version of the app. While it doesn't have great data yet, it has great functionality. Overall, we're pleased with where we're at right now. We're quite excited about the site — it's responsive and quick, and I'm pretty happy with the UX.

Moreover, the deltAlyz team has a strong focus on development and delivery. They understand our goals and can come back with good solutions on the first try. Their members deliver great results within one iteration. On top of that, I've had great interactions with the developers. They're capable and responsive.

How did deltAlyz Corp. perform from a project management standpoint?

We have great communications with deltAlyz. If they identify issues, they propose solutions. We discuss them and resolve everything quickly. In fact, they've identified features we need that aren't in the original plan for the MVP. We've since added those features to the product.

We use Teams for communication and Azure boards for collaboration. They scope out everything about the project and put them on the board, where I can approve their work or discuss it with them.

What did you find most impressive about them?

They're not a big company, but they have a responsive and agile team. Every one of their members is excellent.

Moreover, deltAlyz has applied for and got accepted into Microsoft for Startups Founders Hub. Through this, we've received assistance from Microsoft on technical issues. Some of these issues are fairly significant for our backend architecture to scale up the way we want. On top of that, we've received significant monetary credits for hosting.

It's difficult to find another company that can do all of these things. The upfront assistance we've got has been truly invaluable and greatly appreciated.

Are there any areas they could improve?

No, there aren't any. By developing our product, deltAlyz has learned a lot, especially since we've worked with Microsoft. Overall, their services were great, and the product they've developed is amazing.

Do you have any advice for potential customers?

I highly recommend working with deltAlyz if your project matches their expertise.
